Submitted on 15 Jun 2023

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

The centre Mersenne

The centre Mersenne is a public comprehensive **Diamond Open Access (free to read, no charge to publish)** publishing infrastructure for scientific publications.

It provides editorial teams with

- a **publishing platform** for hosting and dissemination of open access research publications;
- a range of **editorial and technical tools and services** to help to manage the journal workflow (peer-review process, publication...).

The centre Mersenne is developed by **Mathdoc**, a French Support and Research unit of Centre National de la Recherche Scientifique and Grenoble University.

The centre Mersenne has been launched in 2018 with 10 mathematics journals.

The centre Mersenne

The centre Mersenne has been launched in 2018 with 10 mathematics journals.

Supporting institutions

The centre Mersenne is developed by **Mathdoc**

Mathdoc's mission is to develop services towards the scientific community:

- maker of **Numdam** (French digital mathematics library);
- maker of Cedram 1995-2018 (publishing platform for french mathematics journals, extended to the centre Mersenne)
- partner of **EuDML** (European digital mathematics library).

Centre Mersenne additional supports

- Grenoble IDEX (French funds for supporting excellence in universities)
- Fonds National pour la Science Ouverte (National funding for open access in France)
- Ministry of Higher education and research
- ...

The centre Mersenne

What kind of publications?

- Research journals and proceedings;
- newly created or already existing; **flipping journals** are welcome
- of all scientific disciplines in the fields of STEM (science, technology, engineering and mathematics), with an initial kernel in maths;
- compliant with **best editorial practices**;
- formatted with \LaTeX ideally;
- published in **Diamond Open Access** (no charge to read, no charge to publish).
The articles are distributed with a Creative Commons CC-BY licence.

The centre Mersenne

- of all scientific disciplines in the fields of STEM (science, technology, engineering and mathematics), with an initial kernel in maths;
- compliant with **best editorial practices**;
- formatted with **L^AT_EX** ideally;
- published in **Diamond Open Access** (no charge to read, no charge to publish).
The articles are distributed with a Creative Commons CC-BY licence.

Trajectory

- 2018 10 journals, 210 articles published (7 000 pages). *Mathematics*.
- 2019 13 journals, 270 articles published (9 000 pages).
+ *Geomechanics*
- 2020 21 journals, 600 articles published (12 700 pages)
+ *Chemistry, Physics, Biology, Earth Sciences* (= *Comptes Rendus de l'Académie des sciences*)
- 2021 22 journals, 884 articles published (17 834 pages) + *several scientific disciplines* (= *Peer Community Journal*)
- 2022 23 journals, 872 articles published (18 804 pages)
- 2023 \geq 24 revues, + *Computer Sciences*.

Thematic distribution

- *Maths* (15 journals + 1 book + 6 seminars)
- *AI* (1)
- *Physics* (1), *Mechanics* (1), *Geomechanics* (1), *Biology* (1), *Chemistry* (1), *Earth Sciences* (1)
- *Multi-disciplinary journal in Sciences and Techniques* (1).

THE CENTRE MERSENNE ►

An open access publishing platform for scientific publications.

The centre Mersenne is a diamond open access scientific publishing infrastructure developed by [Mathdoc](#), a support and research unit of [CNRS](#) and [Université Grenoble Alpes](#). The centre Mersenne provides all the publishing tools and services that enable editorial teams to manage, produce and distribute their publications.

The journals, books, proceedings or seminars are from all scientific disciplines, composed in LaTeX and distributed in open access.

One website: les Annales de l'institut Fourier

The screenshot shows the homepage of the journal "Annales de l'Institut Fourier". At the top left is the journal's logo, a circular emblem with a star-like pattern and the text "ANNALES DE L'INSTITUT FOURIER". To the right of the logo is the title "ANNALES DE L'INSTITUT FOURIER" in a serif font. Further right are two language selection buttons: "EN" (English) and "FR" (French). Below the title are navigation links: "ABOUT THE JOURNAL", "EDITORIAL BOARD", "SUBMIT A PAPER", and "SUBSCRIPTION".

The main content area features a search bar with the placeholder text "Search articles, authors...". To the left of the search bar are two orange buttons: "Articles to appear" and "Browse issues". To the right is an orange "Search" button. Below the search bar is a dropdown menu currently set to "NOT". A secondary dropdown menu is open, showing options: "All", "Author", "Title", "Date", "References", and "Full text".

Below the search area, there is a paragraph of text: "The Annales de l'Institut Fourier aim at publishing original papers of a high level in all fields of mathematics, either in English or in French. The electronic edition is fully open access and free of author charges." This is followed by a list of article titles and authors, each with a "View More" link:

- New art**
- Commutability of groups of trees**
Carette, Mathieu
- Group orderings, dynamics, and rigidity**
Mann, Kalfayn ; Rivas, Cristóbal
- Diffraction of elastic waves by edges**
Katsnelson, Vasily
- Invariants de Hodge étou S-ordinaires [Simu**
S-ordinary Hodge invariants]
Hernandez, Valentin

At the bottom of the page, there is a footer with three logos and their associated text: "Web publisher:  Mikolaj", "Supported by:  INSTITUT FOURIER", and "Developed by:  Mathdoc".

Another website: Algebraic Combinatorics

The screenshot shows a web browser window with the URL `https://alco.centre-mersenne.org`. The page features a blue header with the journal title "ALGEBRAIC COMBINATORICS" and a navigation menu with links for "About the Journal", "Editorial Team", "Author Guidelines", and "Submit a paper". A search bar is present with the text "Search articles, authors..." and a "Search" button. On the left, there is a logo consisting of a 3D cube-like structure made of blue and yellow cubes. Below the header, the main content area is white. It starts with a paragraph describing the journal as an electronic journal of mathematics. This is followed by a paragraph detailing the journal's focus on high-quality papers in algebra and combinatorics. Below that, it states the journal's adherence to Fair Open Access and its membership in the Free Journal Network. The e-ISSN number "2589-5486" is listed. On the right side, there is a section titled "New articles" which lists three recent publications: "Editorial" by Murali, Satoshi; Reiner, Victor; "On the existence of tableaux with given modular major index" by Swanson, Joshua P.; and "Supercharacter theories of type A unipotent radicals and unipotent polytopes" by Thiem, Nathaniel. A "View More" link is provided at the bottom of this section.

Related editorial platforms in Diamond Open Access

- **Episciences** (épiMaths for mathematics), developed by the french unit CCSD, an **overlay journal platform** based on the open institutional repository HAL;
- **SciPost** (originally Physics);
- **OpenEdition** for social sciences/humanities, developed by CNRS & french institutions
- **SciELO**, Redalyc (mainly journals based in South America platform, all scientific disciplines), **eLibM** (supported by German institutions), ...

Plan of the talk

- 1 The centre Mersenne
- 2 Staff & governance**
- 3 Services
- 4 Business model
- 5 A focus on 2 examples
- 6 On-going projects & perspectives

The staff

The team is composed of Mathdoc staff $\simeq 15$ people $\simeq 10$ FTE dedicated to the centre Mersenne:

- 1 coordinator
 - 1 editor
 - 1 managing editor
 - 2 typesetter \LaTeX /XML,
 - 5 IT developers,
- + administrative support,
- scientifically led by 2 mathematicians.

10 members hold a permanent position.

(+ 2 freelances for part of the typesetting activity).

Governance

- The **scientific council**
 - evaluates candidate journals;
 - advises on orientations and priorities;
 - comprises 8 to 12 scientists (mainly mathematicians) assisted by a pool of experts.

- The **steering committee**
 - takes advice from the scientific council;
 - decides on priorities and allocates resources;
 - comprises Mathdoc directors and representatives of Mersenne's supporting institutions.

Plan of the talk

- 1 The centre Mersenne
- 2 Staff & governance
- 3 Services**
- 4 Business model
- 5 A focus on 2 examples
- 6 On-going projects & perspectives

Editorial services

The essential editorial services systematically provided:

- **Online publication and dissemination of articles** on the centre Mersenne platform:
 - creation of a specific and customised website for each publication
 - attribution of DOI (Digital Object Identifier) with Crossref
 - crosslinking with reference databases, interoperability, an OAI-PMH server...
 - long term preservation through CLOCKSS
 - plagiarism detection
 - Statistics "counter", **cited-by tool**
- **Creation of a customised L^AT_EX template**
- **Installation and maintenance of Open Journal System (OJS):**
 - customisation of a dedicated instance adapted to the editorial board's evaluation process;
 - maintenance and support;
 - documentation and training.

Optional services

- \LaTeX typesetting and layout editing;
- copyediting, proofreading
- managing editor, journal workflow assistance;
- printing (on demand or a posteriori);
- ...

Browsing

Browsing a journal website and accessing articles...

The image displays three sequential screenshots of the Algebraic Combinatorics journal website. The first screenshot shows the 'Table of Contents' page, listing several articles with their authors and page numbers. The second screenshot shows a specific article page titled 'Expansive spectral combinatorics of the truncation of the Shi-tile' by E. Miot and M. Perle. The third screenshot shows the journal's logo and contact information, including the Centre Mersenne logo and the address 'Centre Mersenne, Université de Bordeaux, 33617 Mérignac Cedex, France'.

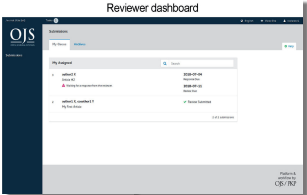

Searching

Searching articles in a journal website. . .

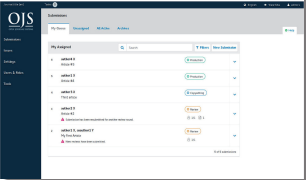

The screenshot shows the homepage of the journal 'Annales de l'Institut Fourier'. At the top left is the journal's logo, a circular emblem with a star-like pattern. To its right is the title 'ANNALES DE L'INSTITUT FOURIER'. Further right are two icons: a flag icon and a 'TeX' icon. Below the title are navigation links: 'ABOUT THE JOURNAL', 'EDITORIAL BOARD', 'SUBMIT A PAPER', and 'SUBSCRIPTION'. A search bar is located in the center, with the placeholder text 'Search articles, authors...'. To the left of the search bar are two buttons: 'Articles to appear' and 'Browse issues'. To the right is a 'Search' button. Below the search bar is a dropdown menu with 'NOT' selected. A second dropdown menu is open, showing search criteria: 'All', 'Author', 'Title', 'Date', 'References', and 'Full text'. Below the search bar, there is a 'New articles' section with a list of articles: 'Commutability of groups of trees' by Girelle, Mathieu; 'Group orderings, dynamics, and rigidity' by Marin, Kathryn; Pivas, Cristóbal; 'Diffraction of elastic waves by edges' by Katanelson, Vitaly; and 'Invariants de Hesse 5-mu 5-ordinaires [Simu 5-ordinary Hesse invariants]' by Hernandez, Valentin. A 'View More' link is at the bottom of this section. At the bottom of the page, there are logos for 'Web publisher: Kluwer', 'Supported by: Institut Fourier', and 'Developed by: Mathdoc'.

Average production cost of an article at centre Mersenne (2020 - 2021)

Production cost per article or page (estimate)

- **Production cost per article:** 810 € (all journals) / 780 € (when not including *Comptes Rendus*) / 140 € for *Peer Community Journal*
- **Production cost per page:** 41 € (all journals) / 28,5 € (when not including *Comptes Rendus*)

This does not take into account: volunteer work of researchers, editorial management,

Business model - general ideas

- Our model is **Diamond OA**: No fees for the authors, no fees for the readers.
- Our business model must be **scalable and sustainable** to welcome 1 to 3 new journals per year.
- So we need to **recover at least running costs** from the journal or from the organisations that support it.
- But our costs have to remain **very low, when not zero**, especially for the journals that have few financial means.

- So we need to **recover at least running costs** from the journal or from the organisations that support it.
- But our costs have to remain **very low, when not zero**, especially for the journals that have few financial means.

Business model - structure of costs

- **General running of the infrastructure and essential publication services**
 - Almost completely supported by CNRS and Univ. Grenoble (staff, costs)
 - + a modest journal annual subscription (**not applicable for journals supported by CNRS**)
 - + funding from institutions, foundations, libraries;
- **Recurrent costs associated to optional services, proportional to the volume published:** covered by invoicing the journal or its supporting institution(s) at cost price or by specific institutional supports. (**not applicable for journals supported by CNRS**)

A common challenge for Académie des sciences and centre Mersenne

- **Doubling the publication volume** of the centre Mersenne.
- **New disciplines** \rightsquigarrow new purposes, new formats (\LaTeX or word with HTML), indexation to new databases, new templates.
- **New metadata**: Orcid identifiers, Equal Contrib...
- For the centre Mersenne, need **to scale-up** our administrative and financial procedures (public markets for suppliers, diffusion agreements with journals, official pricing).
- For the Académie des sciences, need **to find a recurrent funding** for the production costs.
- This transition has revitalized the journal and led to new projects: semi-automatic translation, on-line comments (on-going)

Figure 1. The constraints in the (β, η) plane from (left) all relevant processes, and (right) from CP-violating asymmetries in B decays only [31].

4. The CKM mechanism and CP violation in beauty

The three-generation SM violates CP. Among the parameters of the SM Lagrangian, there is a single phase (or, equivalently, a single imaginary parameter), which appears in V , the CKM matrix that parametrises the W^+ interactions with $\bar{u}_i d_j$ pairs (where $u_{i,1,2,3} = u, c, t$, and $d_{i,1,2,3} = d, s, b$)

$$\mathcal{L}_{W^+} = -\frac{g}{\sqrt{2}} \bar{u}_i V_{ij} W^+ d_j + \text{h.c.} \quad (12)$$

The CKM matrix depends on three real and one imaginary parameters. The Wolfenstein parametrisation is particularly useful

$$V = \begin{pmatrix} 1 - \frac{1}{2}\lambda^2 & \lambda & A\lambda^3(\rho - i\eta) \\ \lambda & 1 - \frac{1}{2}\lambda^2 & A\lambda^2 \\ A\lambda^3(1 - \rho - i\eta) & -A\lambda^2 & 1 \end{pmatrix}. \quad (13)$$

The fact that all quark flavour-violating processes and all CP-violating processes depend on only three real (λ, A, ρ) and one imaginary (η) parameters makes the CKM mechanism of flavour and CP violation subject to stringent tests. Here, CP-violating processes play a special role. The fact that CP is a good symmetry of the strong interactions implies that CP asymmetries dominated by interference of decays with and without mixing are subject to a uniquely clean theoretical interpretation. Thus, for example, within the SM

$$\mathcal{A}(\lambda_q \epsilon_q) = \frac{2\eta(1 - \rho)}{\eta^2 + (1 - \rho)^2} \quad (14)$$

with hadronic uncertainties entering only at the level of a few percent corrections.

In the literature, one often defines $\beta + i\theta = -(V_{ub}V_{cb}^*)/(V_{ud}V_{cd}^*)$ which is valid to all orders in λ . The parameters ρ and η approximate β and θ to order λ^2 . The various constraints in the (β, η) plane are presented in Figure 1. CP asymmetries in B decays play a major role: $\mathcal{A}_{CP}^{\text{tree}}, \mathcal{A}_{CP}^{\text{mix}}$ and the CP asymmetry in $B \rightarrow DK$ decays constrain with impressive accuracy the angles

$$\alpha = \arg\left(\frac{V_{td}V_{cb}^*}{V_{ud}V_{cb}^*}\right), \quad \beta = \arg\left(\frac{V_{td}V_{ub}^*}{V_{ud}V_{ub}^*}\right), \quad \gamma = \arg\left(\frac{V_{cb}V_{ub}^*}{V_{cb}V_{ub}^*}\right) \quad (15)$$

respectively. As there is a region in the (β, η) plane that is consistent with all measurements, the CKM mechanism of flavour violation and the CKM mechanism of CP violation provide a consistent explanation of all data.

5. Probing new physics with CP violation in B decays

The consistency of the measured CP violation in B decays with the SM predictions leads to strong constraints on new physics. In the previous section, we assumed that the various flavour-violating and CP-violating observables are accounted for by the CKM matrix, and tested the

Table 3. Electrical parameters of the (TbO/PS/Al) system

Complex	I_0 (A)	ϕ_b (V)
[Zn ^{II} (TMPP)(4,4'-bipy)-2](4,4'-bipy)-2]Cl ₂ O	6.027×10^{-8}	1.2333

Figure 4. Schematic representation of the porphyrin macrocycle of the [Zn(TMPP)(4,4'-bipy)] complex showing the displacements of each atom from the 24-atom mean plane in units of 0.01 Å.

[Zn^{II}(TMPP)(HMTA)], we note that our complex (I) has a high barrier height ϕ_b compared to the related zinc-IMEA derivative. This is most probably due to the aromatic ligand 4,4'-bipy for (I), which can prevent the distribution of the charge contrary to the case of the related species containing the non-aromatic ligand HMTA.

It is the same for the saturation current 6.027×10^{-8} A for our zinc(II)-4,4'-bipy derivative, which is very low compared to that of the related [Zn^{II}(TMPP)(HMTA)] complex whose value is equal to 6.57×10^{-5} A. These results show that the nature of the axial ligand plays a very important role in the optoelectronic properties for this type of porphyrin compound.

The variation of I as a function of V has been represented in a log-log plot to better study the mechanism of electrical conduction across the junction (Figure 6).

For complex (I), as shown by this figure, there are different regions where the current varies as a function of the potential according to the relation $I = V^m$, where m represents the slope for each region and provides information about the type of conduction mechanism.

The slope value is close to unity at low voltage defining the ohmic region. In this region, the presence of a small amount of interface barrier hinders charge injection. In this case, the density of thermally excited load carriers is insufficient and trap levels are empty [52]. The current density is given by (2):

$$J_0 = q \cdot p_0 \cdot \mu \cdot \frac{V}{d} \quad (2)$$

Here q is the electronic charge, μ is the charge mobility, p_0 is the free carrier density, d is the film thickness and V is the applied voltage.

The slope value is approximately 1.6 at medium voltage in the case of our zinc porphyrin complex, where the voltage follows the power law dependence ($I-V$), which is related to the space-charge limited current mechanism (SCLC). Moreover, the density of the injected charges from electrodes increases. Since the applied voltage passes through the transition voltage $V = 0.53$ V, the density of the injected charges will dominate the transport capacity of the [Zn(TMPP)(4,4'-bipy)(4,4'-bipy)-2]Cl₂O complex. In this regime, the current density varies following equation (3):

$$J_{SCLC} = \frac{9}{8} \epsilon_0 \mu_0 \epsilon \frac{V^2}{d^2} \quad (3)$$

Here ϵ is the material permittivity (assumed to be $4\epsilon_0$, where ϵ_0 is the vacuum permittivity) and $\mu_0 \epsilon$ is the effective carrier mobility equal to $0.1 \mu_0 \epsilon$, which is the free charge fraction with $\beta = p_1/(p_1 + p_2)$. Parameters p_1 and p_2 represent the free and trapped charge carrier densities, respectively, d is the film thickness and V is the applied voltage.

According to the SCLC model (3), $\mu_0 \epsilon$ for the film containing complex (I) was calculated with a value of $0.45 (10^{-5} \text{ cm}^2/\text{Vs})$. This result is comparable to the literature value of about $10^{-5} \text{ cm}^2/\text{Vs}$ for the 2,7-distyrylcarbazole p -type species [53–55].

Centre Mersenne: On-going projects

- **Full-text for all articles:** \LaTeX \rightarrow HTML online. Should be available by the end of 2023.
- **Semi-automatic translation of articles:** an online interface enabling scientists or professional translators to translate automatically and post-edit articles of the *Compte Rendus de l'Académie des sciences*. Available by mid-2023 for Chemistry, Biology, Earth sciences. See next slide.
- **Comments online:** platform enabling authenticated scientists to post comments on articles. Should be available by the end of 2023 for the *Comptes Rendus de l'Académie des sciences*.

Semi-automatic translation: focus on the project

Project sponsored by the French Ministry of Higher Education and Research and the French Ministry of Culture. Two-fold objective:

- Establishing a **bilingual scientific corpus** that could be utilized as a dataset to train an AI;
- Developing a **comprehensive computer-assisted translation software** set up on the publication website of the *Comptes Rendus de l'Académie des sciences*.

Features

- Principle: machine translation via DeepL possible, and systematically followed by human voluntary or professional post-editing of articles.
- Pivot format: HTML.
- Publication of the translation in PDF (via an intermediate \LaTeX format) and HTML with a CC-BY licence next to the original work.

Means: 1 professional translator and 1 IT developer during 12 months, 1 freelance translator, + Mersenne staff

Outcome after 12 months: 25 articles translated and the interface being tested on a test site.

Difficulty: math formulas are usually not handled by computer-assisted translation softwares.

Conclusion: Main challenges for the centre Mersenne

- Face the **increasing volume of publication** since 2018.
- **Adapt to new editorial practices** because new scientific disciplines involved \rightsquigarrow specific adaptations on OJS and on the platform.
- **Adapt our platform to new formats** (not all the journals in \LaTeX).
- Develop **efficient and ethical services** (semi-automatic translation, full-text...). Improve quality, and avoid relying on bibliometric indicators.
- Achieve the administrative and financial procedures and contracts taking into account the public administration constraints.
- Hire and form people, minimize the outsourcing for typesetting.
- **Convince the community that the centre Mersenne is a nice, reliable and long-term publishing solution to create or to flip journals in open access.**

Thanks!

Why Mersenne?

Marin Mersenne (1588-1648) has been nicknamed “the secretary general of the republic of scientific letters”, as he acted as a hub for scientific information of his time, just before the advent of journals and academies.

Why Mersenne?

Marin Mersenne (1588-1648) has been nicknamed “the secretary general of the republic of scientific letters”, as he acted as a hub for scientific information of his time, just before the advent of journals and academies.

A quotation (Baillet, 1691)

“Mersenne s'estoit rendu comme le centre de tous les gens de lettres par le commerce continuel qu'il entretenoit avec tous, et tous avec luy. C'estoit a luy qu'ils envoyoient leurs doutes et leurs difficultez pour estre proposees par son moyen a ceux dont on attend les solutions ; et lorsqu'il les avoit reçues, il les leur renvoyoit faisant a peu pres dans le corps de toute la republique des Lettres la fonction que fait le coeur dans le corps humain a l'egard du sang. [...] Les Italiens le regardoient aussi bien que nous comme le grand negociant des Lettres, qui fournissoit les provisions aux autres, et qui scavoit exiger d'eux ce qu'ils estoient capables de produire.”

A quotation (Baillet, 1691)

“Mersenne was like the center of all scholars by the continual commerce he maintained with all, and all with him. It was to him that they sent their doubts and their difficulties to be proposed by his means to those whose solutions were awaited; and when he had received them, he sent them back to them, having almost in the body of the whole Republic of Letters the function which the heart makes in the human body with regard to blood. The Italians regarded him, as we do, as the great mediator of the Letters, who furnished provisions to others, and was able to demand of them what they were capable of producing.”
